

SERVAL standalone automated microwell plate heat sealer

Wildcat Serval is a fully electrical operation automated benchtop microwell plate heat sealer.

The sealer offers a simple straightforward bench top sealing system, the user can set temperature and sealing times in the easy to use graphical user interface.

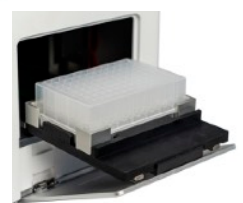

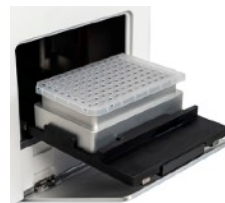

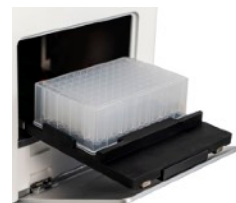

The large touch screen allows easy operation, loading the plate in landscape form means the overall size of the unit is compact and easy to maintain.

Simple hand loading of the foil and settable indexing within the software mean that minimal foil is wasted during the load process.

The foil on plate position can also be adjusted within the software, this is password protected to ensure this can only be changed by verified users.

Plate heights from shallow well to deep well blocks can be processed with a range of adaptor plates available for the more obscure plate types on request.

Simple user interface allows users to program and set parameters suitable for each plate, film or assay type.

SERVAL standalone automated microwell plate heat sealer

Product Details:

Model: WCTHS-10
Voltage: 110/220vac
50/60Hz
Power: 500W
Weight: 15kgs

Suggested films:

Peel Seal	RBX-10411501	500M Roll
Pierce Seal	RBX-10711501	500M Roll
Optic PCR Seal	RBX-10211501	500M Roll
Combination Seal	RBX-11411501	500M Roll
Storage Seal	RBX-10811501	500M Roll
DMSO Peel Seal	RBX-10511501	500M Roll
